MANASA GADIRAJU

Data Analyst | AI & Data Science | Python | SQL | Power BI | Microsoft Fabric (DP-700) | Snowflake

(517) 918-3993 | varma.manasa1011@gmail.com | St. Louis, Missouri | linkedin.com/in/manasa-gadiraju-47949918a

SUMMARY

Data Analyst and Analytics professional with 5+ years of experience analyzing operational, financial, supply chain, insurance, and ESG data and developing analytical solutions that support business decisions. Strong expertise in SQL, Python, Power BI, Tableau, data visualization, data modeling, ETL/ELT, data validation, and data quality. Experienced in analyzing trends and performance gaps, defining KPIs, investigating data discrepancies, developing dashboards, performing root cause analysis, conducting qualitative research and surveys, and translating business questions into analytical requirements and recommendations. Strong background collaborating with technical and non-technical stakeholders to deliver reliable, actionable insights. Currently pursuing an M.S. in Artificial Intelligence with a focus on Data Science, with an M.S. in Business Analytics and Microsoft certifications in Power BI and Fabric Data Engineering.

TECHNICAL SKILLS

Power BI & Reporting: Power BI, DAX, Power Query, Report Development, Dashboard Development, Data Visualization, KPI Development, Row-Level Security (RLS/OLS), Interactive Reports, Drill-through, Filters, Direct Lake, Semantic Models, Report Performance Optimization

Data Modeling: Dimensional Modeling, Star Schema, Snowflake Schema, Fact & Dimension Modeling, Data Relationships, Semantic Model Design, Data Transformation, Data Quality

Microsoft Fabric: Fabric Lakehouse, Fabric Warehouse, Data Factory, Data Pipelines, OneLake, Direct Lake, Semantic Models, Eventstream, Spark, Notebooks, Medallion Architecture, Delta Lake

Data Engineering: SQL, Python, PySpark, Databricks, Snowflake, dbt, ETL/ELT, Incremental Processing, Data Integration, Data Validation, Reconciliation, Data Lineage

Testing & Validation: UAT, Test Case Development, Test Scenario Validation, Data Validation, Regression Testing, Defect Identification, Results Validation, Source-to-Target Validation

Analytics & Research: Business Requirements, KPI Analysis, Supply Chain Analytics, Financial Analytics, Forecasting, Qualitative Research, Stakeholder Interviews, Survey Design & Analysis, Executive Reporting, Operational Reporting

Cloud & Platforms: Microsoft Azure, Azure Databricks, Azure Data Factory, Azure Synapse, Snowflake, Guidewire, Salesforce

Tools & Languages: Python, SQL, PySpark, Spark, Git, Tableau, Java

PROFESSIONAL EXPERIENCE

Data & Analytics Engineer | Zurich North America **March 2024 – August 2026**

St. Louis, Missouri

- Built the finance and supply chain reporting layer used for operational and executive reporting, translating stakeholder questions into KPI definitions, data requirements, and **Power BI** dashboards.
- Ran stakeholder interviews and working sessions with finance and supply chain teams to uncover reporting pain points and decision needs, using **qualitative research** findings to shape KPI definitions and dashboard design.
- Designed, ran, and analyzed **surveys** of report users on dashboard usability, data trust, and unmet reporting needs, using the results to prioritize the reporting backlog.
- Combined research findings with operational and financial data analysis to deliver recommendations to business stakeholders on performance gaps, process issues, and reporting improvements.
- Developed **Power BI** semantic models on star-schema fact and dimension tables with **DAX** measures, standardizing KPI definitions across operations and finance so executive reports used one set of numbers.
- Designed analytical data models across **Snowflake**, **Databricks**, and **Microsoft Fabric** to support scalable data products and downstream reporting.
- Built **SQL** and **Python** validation and reconciliation workflows across 50+ daily production data quality checkpoints, cutting manual review effort by 40%.
- Led root-cause analysis on data discrepancies across source, transformation, and reporting layers, working with data engineers to fix integration and transformation issues.
- Optimized **SQL** queries and analytical data models behind reporting pipelines, reducing nightly processing latency by 35%.

Data Analyst – ML Associate | Treeni Inc. **January 2023 – December 2023**

Arlington, Texas

- Built ESG compliance, supply chain, and operational KPI dashboards in **Power BI** and **Tableau** for client reporting, working with stakeholders to define KPIs and improve dashboard usability.

- Developed parameterized **dbt** models on **Snowflake** to standardize medallion-style ETL across multiple supply chain datasets, with lineage and transformation documentation; reduced transformation errors by 15% and sped up customer onboarding by 30%.
- Automated about 60% of recurring analytics workflows using **Python** (**Pandas**, **NumPy**), **SQL** stored procedures, and **Git**-versioned processes, shortening report turnaround.
- Applied **ARIMA** and **Prophet** forecasting to inventory and supply chain data, reducing stockouts by 12% and improving stock planning.

Data & Analytics Engineer (Guidewire) | **Capgemini** **October 2020 – November 2022**

Hyderabad, India

- Delivered claims data integration and analytics for **Guidewire ClaimCenter** across Auto, Property, General Liability, and Workers' Compensation lines.
- Defined data mappings and business rules with business and technical stakeholders, turning claims data requirements into analytical datasets and reporting solutions.
- Built **API**-based workflows and **XML** data models to extract claims data from Guidewire, with **SQL** transformations integrating it into downstream analytical systems.
- Performed **SQL** source-to-target validation and built test scenarios to verify data completeness, accuracy, and transformation logic against business rules.
- Supported **UAT** and production release by validating reporting outputs against source data, documenting defects, and working with technical teams on resolution.

PROJECTS

Real-Time Order & Customer Data Platform | *Microsoft Fabric, Eventstream, Event Hubs, Spark, Delta Lake, SQL*

- Designed a real-time pipeline in **Microsoft Fabric** that captures customer and order events with **Eventstream** and transforms them in **Spark** into **Delta** tables.
- Implemented incremental processing, duplicate event handling, change tracking, and data quality validation to keep analytical datasets reliable for downstream reporting.

End-to-End Supply Chain Data Engineering Platform | *Microsoft Fabric, OneLake, Data Factory, Lakehouse, PySpark, SQL, Power BI*

- Built an end-to-end pipeline in **Microsoft Fabric** ingesting orders, inventory, product, supplier, and shipment data through **Data Factory**, **OneLake**, and **Lakehouse**.
- Developed **PySpark** and **SQL** transformations with incremental loading, deduplication, and data quality checks across a Bronze/Silver/Gold architecture, delivering curated datasets for **Power BI** supply chain reporting.

AI Knowledge Assistant Chatbot | *Python, Azure OpenAI, LangChain, RAG, Pinecone, SQL*

- Built a conversational assistant that answers questions from business documents and structured data using retrieval-augmented generation, semantic search, and grounded prompting.
- Implemented document chunking, embeddings, vector retrieval in **Pinecone**, and source-aware prompting to improve answer relevance and reduce unsupported responses.

Data Analytics Copilot | *Python, LLMs, SQL, Power BI, Prompt Engineering*

- Developed an AI chatbot concept for natural-language analytics, letting users ask about KPIs, trends, and operational data and receive conversational explanations.
- Designed prompt templates and **SQL**-generation workflows to translate business questions into data queries and plain-language insights.

EDUCATION

Master of Science, Artificial Intelligence (Data Science) | Indiana Wesleyan University — August 2026 – May 2028

Master of Science, Business Analytics (GPA: 3.8/4.0) | University of Texas at Arlington — January 2022 – December 2023

B.Tech., Electronics & Communication Engineering | CMR Institute of Technology — August 2016 – September 2020

CERTIFICATIONS

- **Microsoft Certified: Fabric Data Engineer Associate (DP-700)**: Lakehouse & Warehouse design, medallion architecture, ETL/ELT orchestration, Delta Lake, Direct Lake semantic models, Spark-based processing.
- **Microsoft Certified: Power BI Data Analyst Associate (PL-300)**: DAX, Power Query M, semantic modeling, RLS/OLS, dashboard performance optimization.
